RACHANA ANGARA

Github | Portfolio | (+1) 6232766128

SKILLS

Programming Languages: Java, Python, JavaScript, TypeScript, SQL
Frontend Technologies: HTML5, CSS3, JavaScript, React.js, Angular, Responsive Web Design
Backend Technologies: Node.js, Express.js, Spring Boot, RESTful APIs, Microservices
Data bases & Cloud & DevOps: MySQL, MongoDB, Docker, CI/CD Pipelines, Git

WORK HISTORY

Thunderbird School of Global Management Nov 2024 to May 2026
Information Technology Helpdesk | Phoenix, AZ

- Delivered Tier-1 technical support and troubleshooting system for faculty and students, **maintaining a 95% customer satisfaction rate.**
- Managed user permissions, confidential records, and access controls via Workday, ensuring **100% compliance** with university data security protocols.

Barclays August 2021 to August 2024
Software Engineer | Maharashtra, India

- Architected end-to-end onboarding and support portals using React.js and Angular, implementing code-splitting and SSR/ISR to improve **Core Web Vitals (LCP/TTFB) by 20%.**
- Built scalable Node.js REST APIs with robust pagination, validation, and rate-limiting, reliably processing 100,000+ daily records with zero downtime.
- Configured and optimized relational SQL database schemas, reducing complex query execution times by 30%.
- Engineered automated CI/CD pipelines incorporating rigorous unit and end-to-end testing, effectively **reducing production code regressions by 40%.**
- Executed root-cause analyses, documented runbooks, and collaborated across QA and Product teams to **increase cross-functional Agile delivery efficiency by 15**%.

PERSONAL PROJECTS

The Last Confession | *Three.js, React Three Fiber, GSAP, WebGL*

- Engineered a browser-based 3D psychological puzzler using React Three Fiber and WebGL, optimizing rendering pipelines to **improve cross-device framerates by 40%.**
- Integrated complex mechanical animations via GSAP, achieving 100% fluid transitions and reducing rendering stutters on lower-end devices.

CloudScale ERP | *Next.js, Go, Redis, PostgreSQL*

- Built a high-frequency ERP dashboard leveraging Go and Next.js, reducing real-time data ingestion latency by 30% via WebSockets.
- Architected predictive analytics pipelines using Redis caching and PostgreSQL, **increasing data processing throughput by 45%**.

NeuroContent AI | *React, FastAPI, AWS Lambda, Stripe*

- Developed a full-stack generative AI platform, orchestrating distributed task queues with AWS Lambda to improve **processing efficiency by 50%.**
- Integrated secure Stripe payment gateways and continuous inference monitoring, maintaining 99.9% uptime for user-facing API routes.

Nexus Service Engine | *Node.js, Angular, PostgreSQL, TypeScript*

- Architected an enterprise service orchestrator combining Angular and Node.js, streamlining automated delivery workflows by 40%.
- Developed high-concurrency REST APIs and executed complex PostgreSQL query optimizations, increasing **transaction handling capacity by 25%.**

CoreAuth Service | *Java, Spring Boot, Microservices, Docker*

- Engineered a carrier-grade user management microservice with Java and Spring Boot, scaling to support 100,000+ active enterprise users.
- Orchestrated an optimized MySQL and MongoDB hybrid storage solution, achieving a 35% reduction in authentication API latency.

EDUCATION

Master of science: Software Engineering August 2024 to May 2026
Arizona State University | Tempe, AZ CGPA: 3.63/4.00
Bachelor of Technology: Computer Engineering August 2017 – August 2021
Cummins College of Engineering for Women CGPA: 7.27/10

Certifications

Meta Backend Developer

- Design, build and operate large-scale, low-latency services and APIs focused on distributed systems, data modeling, performance, reliability and privacy-by-design.
